

PRESS RELEASE

Wolters Kluwer introduces agentic AI invoice review to LegalVIEW BillAnalyzer

Invoice Review Agent moves beyond detection to autonomously adjust non-compliant legal invoice line items with full transparency and legal ops control

Houston – May 5, 2026 - [Wolters Kluwer Legal & Regulatory's ELM Solutions](#) business today announced the launch of [LegalVIEW® BillAnalyzer](#) Invoice Review Agent the first agentic AI capability to power the business' innovative legal spend management platform. Powered by Expert AI, the new feature identifies non-compliant invoice line items and automatically implements adjustments, delivering a clear, auditable rationale behind every decision to drive more proactive spend management without sacrificing governance.

"Future-ready legal teams know that it isn't enough to simply flag non-compliance," said [Dean Sonderegger](#), **Senior Vice President & General Manager of Wolters Kluwer ELM Solutions**. "We're helping legal operations teams modernize invoice review in a way that is automatic where it should be, flexible where it needs to be, and always aligned to their strategy and guardrails.

The agentic AI behind [LegalVIEW® BillAnalyzer](#) Invoice Review Agent was developed by a team of nearly 1,000 compliance and process experts building on decades of expertise, as well as the more than \$200 billion in actual legal invoice data found in Wolters Kluwer's [LegalVIEW database](#).

The introduction of agentic invoice review enables corporate legal departments to focus on strategy, reduce complexity, and strengthen spend controls with:

- **Human oversight:** Agentic AI will automatically perform invoice adjustments based on a legal department's billing guidelines, customized guardrails and strategy. Organizations can easily adjust parameters to allow for exceptions, and retain full control over what AI can and cannot change.
- **Full transparency:** Each adjustment made is accompanied by a clear explanation outlining specific guideline violations identified. This ensures that actions remain transparent, defensible, and easy to audit. Decisions made by AI also remain fully auditable and reversible to ensure strong governance.
- **Instant invoice summarization:** AI-powered summaries enable legal teams to quickly understand the work performed, key cost drivers, and any adjustments implemented without reviewing every line item.

- **Natural Language controls:** Legal teams can interrogate invoices for spend and compliance trends in addition to updating billing guidelines and exceptions. This reduces complexity to help accelerate adoption and drive faster savings.

[Wolters Kluwer's Legal & Regulatory](#) division enables legal and compliance professionals to improve productivity and performance, mitigate risk, and solve complex problems with confidence. Its expert solutions combine deep domain knowledge with advanced technology and services to deliver better outcomes, advanced analytics, and improved productivity for customers.
